

NEW TOOL AVAILABLE

# REAL-TIME COVID-19 NATIONAL SITUATIONAL AWARENESS DASHBOARD FOR LAW ENFORCEMENT

In response to the Coronavirus (COVID-19) pandemic and its impact on law enforcement and other first responders, the National Police Foundation, in collaboration with the National Alliance for Public Safety GIS and Esri, has developed a real-time situational awareness tool for law enforcement agencies. The tool, featuring a [real-time dashboard](#), provides critical insights for executives, commanders, and others to better assess and monitor the impact of COVID-19, including officer exposures, diagnoses, workforce impacts, and PPE needs and projections. The interactive tool allows agencies to provide confidential, real-time updates that are instantly incorporated into the national dashboard and map. The data is then aggregated and mapped at the state-level in order to show these impacts across the country. Agencies can then compare their own impacts with that of others in law enforcement.

## Real-time updates

Identifies the number of officers exposed through their work, number of officers officially tested and diagnosed, number of officers placed in off-duty status due to exposure, and number of officers that are self isolating due to symptoms or off-duty exposure

Estimates the availability of necessary PPE, the most critical PPE that agencies are lacking, and current and projected shortages
